

PREFIXX® PROTECTIVE FINISH

THE RIGHT CHOICE FOR HEALTHCARE UPHOLSTERY

PreFixx protective finish is engineered to meet the stringent requirements of hospital, contract and institutional settings. As part of a comprehensive cleaning and disinfecting program, upholsteries with PreFixx are an important component in the battle to control and reduce Healthcare-Associated Infections (HAI).

CHEMICAL RESISTANCE

Upholstery with PreFixx protective finish has been engineered to be repeatedly cleaned and disinfected with commonly used chemicals in healthcare settings without discolouring or damaging the finish.

ANTIMICROBIAL

PreFixx protective finish contains antimicrobial agents to protect the upholstery by providing resistance to the growth of many types of bacteria and other microbes which may be present in healthcare settings. Antimicrobial properties are built-in to inhibit the growth of bacteria that may affect the product. The antimicrobial properties protecting the upholstery should not be relied upon to protect users or others against bacteria, viruses, germs, or other disease organisms.

EASY TO MAINTAIN AND CLEAN WITH ENHANCED STAIN RESISTANCE

Because its surface is nonporous, cleaning and disinfecting upholstery with PreFixx is fast and easy. Spills or bodily fluids can be easily cleaned — often with only a mild soap and water. Furthermore, the PreFixx protective finish is a barrier that resists stains from penetrating the surface of the upholstery.

DURABLE, EXTENDED USEFUL LIFE

PreFixx protective finish greatly increases scuff and abrasion resistance leading to longer lasting upholstery.
